

Setup

1. Use the following link to download and install Visual Studio 2022 **Community Edition** (Click the download dropdown button and select Community 2022):

[Visual Studio 2022 IDE - Programming Tool for Software Developers \(microsoft.com\)](https://visualstudio.microsoft.com/ide/#vs)

2. In the Visual Studio Installer select the following **Workloads**:
 - .NET desktop development
 - ASP.NET and web development
 - Node.js development
3. In the Visual Studio Installer select the **Individual components** tab and the select the following components under the **Cloud, database, and server** section:
 - Data sources and service references
 - Data sources for SQL Server support

When you run Visual Studio for the first time, you must **sign in using your Microsoft Account**.

If you have Visual Studio 2022 already installed and you want to add components go to:

Tools > Get Tools and Features to open Visual Studio Installer.
